

## **Carroll County, VA Chooses AppGeo to Develop GIS Web Application**

BOSTON – July 2009 – Carroll County, Virginia has selected Applied Geographics, Inc. (AppGeo) to develop a county-wide GIS Web application that will present maps, aerial photography and property information. AppGeo will host the application for the County from its secure hosting facility.

“We selected AppGeo because they demonstrated that they could build us a high-quality custom-built site,” said Assistant Administrator, Nikki Shank. “We liked what we saw in other Web sites that they had created – a lot of functionality combined with ease of use.”

“This program along with the GIS Department in Carroll County, under the leadership of Emily Moberg, will allow us to make more intelligent data based decision making in the near future”, said County Administrator Gary Larrowe.

“We are pleased to have been selected by the County,” said Steve Anderson, GISP, Vice President of Business Development at AppGeo. “Based on our many years of experience developing GIS Web applications, including work for Albemarle County, VA, we are able to offer the County a wide range of Web mapping features and functions.”

Custom Web application development and secure, long-term Web hosting are core businesses of AppGeo, and AppGeo currently hosts applications for dozens of clients in more than 5 states. AppGeo maintains a staff of full-time GIS programmers who are dedicated to innovation and state of the art custom solutions.

### **About Applied Geographics, Inc.**

Applied Geographics, Inc. (AppGeo, [www.appgeo.com](http://www.appgeo.com)) has been providing high quality GIS services and innovative solutions to government and private sector clients since 1991. AppGeo empowers its customers to put GIS to work through the intelligent use of geographic data and applications that improve work flows and business processes. AppGeo provides a full range of GIS consulting services: GIS strategic and implementation planning, data development, custom applications, training, cartography, implementation assistance and technical support. AppGeo services are available through a variety of state blanket contracts and nationwide through its GSA IT Schedule 70.
