

Applied Geographics, Inc.

JOB OPENING:

Job Title: ASP.NET Web Developer

Location: Boston, MA

Date Posted: June 1, 2009

Job Description:

Applied Geographics, Inc. (AppGeo) seeks a talented, dynamic, motivated application developer with web development and database skills to join our software development team. AppGeo is an established technology and geographic information system (GIS) consulting firm, providing professional services to a wide-range of customers. The successful applicant will join a staff focused on applying web-based technologies to solving the needs of its clients.

The position requires a minimum of two years experience with ASP.NET development using C#. Experience with both Oracle and/or SQL Server including database design, ETL and database access via ADO.NET is also required. Web development skills should include HTML/CSS; JavaScript; frameworks such as jQuery, Dojo and/or Prototype; and REST and SOAP web services. Familiarity with web-based environments such as Flex and Silverlight is a plus. An interest in scientific mapping is desirable but such experience is not necessarily required.

The position demands a high level of interaction with project managers and clients, thus it requires excellent communication skills. Examples of work (e.g. web-site URLs) and code samples will be requested.

Please email your resume and a cover letter to DevJob@appgeo.com. Your cover letter should discuss salary expectations and document your US citizenship status.
