

## County of Albemarle, Virginia provides public access to Advanced GIS-Web Application

BOSTON – March 2007 – The County of Albemarle, Virginia recently made its web-based GIS application available to the public through the County’s website (<http://gisweb.albemarle.org/>). The application offers both basic and advanced search, display, and mapping capabilities, making it a useful self-service tool that meets a variety of information needs.

The original Web-based GIS application was built by Applied Geographics, Inc. (AppGeo) to meet the County’s requirements for an extensive array of data query, information retrieval and GIS capabilities, including reporting, map rendering, map markup and sharing, and basic geoprocessing.

AppGeo built the application using its .NET connector components for ESRI’s ArcIMS. Much of the site’s data query capability is enabled through web pages that are dynamically generated using user configurable settings. Albemarle staff is able to enhance and extend the site functionality without having to write application code. Non-programming staff can readily implement new capabilities. The Albemarle County press release can be seen at <http://www.albemarle.org/release.asp?ID=9171&releases=current>

### About Applied Geographics, Inc.

Applied Geographics, Inc. (AppGeo) has been providing high quality GIS services and innovative solutions to government and private sector clients since 1991. AppGeo specializes in the design and installation of Web-based interactive mapping and enterprise-wide information systems that are tailored to client workflow processes and requirements. AppGeo is an award-winning ESRI Business Partner. AppGeo services are available through a variety of state blanket contracts and nationwide through its GSA IT Schedule.
